Invoice 1250

"The collection is a most valuable one and represents a number of new species and considerable extension of ranges in many cases. A number of the new species are in manuscript by Curator Standley and marked with "Ined". in parenthesis. A few of the collections which are named only to genus represent new species which will be described by Assistant Curator Steyermark andnames will be furnished you later. Three specimens of Senecio and one speciman of another composite have been sent to specialists for determination since they probably represent new species in their respective groups." Statement by C. G. Gregg - Director Field Museum.
